

Advisory Board Report 2012 on CEAUL, Lisbon

Advisory Board members: Prof. Dr. Antonio St. Aubyn, Prof. Dr. Jürg Hüsler, Prof. Dr. Wolfgang Urfer

Group leaders: Dr. Dinis Pestana, Dr. Maria Ivette Gomes and Dr. Antonia Amaral Turkman

The center had to deliver a joint report for the years 2011 and 2012, but it was restricted to certain conditions. Much further report material is given in the report for 2011 and on the websites <http://www.ceaul.fc.ul.pt/publicacoes.html> and <http://www.ceaul.fc.ul.pt/pubmembross.html> for the year 2012. The center is still organized in three groups each lead by a group leader. In the future, the center intend to concentrate more in two groups, by joining a smaller group into a larger one to have a stronger interaction between the researchers. This was a discussion point already sometimes ago.

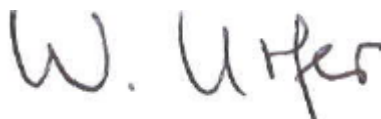

The members of the centers were active as in former years. They published numerous papers in national and international scientific peer-reviewed and non-peer-reviewed journals. The websites list papers in peer-reviewed international journals produced by the members of the center, 42 papers in 2011 and 46 papers in 2012. Besides of these lists, they published many more articles as stated in the report and proceeding publications and a large number of chapters in books. They presented their work at national and international conferences, as invited and contributing speakers. They were collaborating with many scientific researchers in Portugal as well as in foreign countries. All these activities can be noticed by their publications. Faced by the financial situation and restrictions, the collaborators of the center were highly active in organizing conferences, seminars and meeting to sustain their usual successful research environment. We expect that the center will be supported in the future years to maintain their outstanding research activity. The vision of the center for the future years includes most important and active research topics in fundamental research as well as in applications. Besides of the research activities the investigators and contributors of CEAUL have a heavy load in teaching, administration and research at universities and CEAUL.
